

Economic Growth and Soviet-American Rivalry, Issue 2286, #1961 #Abraham Samuel Becker #Rand Corporation, 1961

The author argues that the Soviet economic system was capable of producing economic growth, and did for most of its existence exhibit growth. But it revealed over a time a key weakness compared with capitalism: a systemic inability to cope well with technological change, which doomed the Soviet economy in the long-run. Moreover, 'success' in partially liberalising Soviet society, so that terror receded into the background, reduced the effectiveness of a top-down economic system that relied on authority and obedience.
