World Health Organization. <https://apps.who.int/iris/handle/10665/79059>. Description. Hypertension is a common disease of the cardiovascular system. The word hypertension means increased pressure in the blood vessels. The main cause of the disease can be called the narrowing of the arteries or arterioles due to the impact on the organism of various factors. Hypertension refers to chronic diseases, and the development of the patient needs to undergo treatment until the end of life, as to lead to normal pressure only for a short period of time. The danger of the disease that if untreated, it progresses and results in serious consequences, e.g. myocardial infarction or stroke.
